

Next Experience, Navigation, and Access

In ServiceNow, the Next Experience user interface is the main way for users to interact with the applications and information in a ServiceNow instance. You can access all applications and modules within the Platform, as well as select your user preferences, all from the banner frame! Speaking of preferences, you can personalize your instance and customize the display accessibility and notifications in the Platform. You have also seen all the common user interfaces you'll experience while in this course. Have questions throughout? You can always refer to ServiceNow Product Documentation or the Developer site to learn more and practice in an instance, any time. Familiarize yourself with all the wonderful resources ServiceNow has to offer. Try the Next Experience UI yourself by heading to the next activity.
